Speaker Hello, my name is Tammy and this is a normal voice sample for a sample demo. I am just speaking in relaxed and natural way, like a short talk or casual podcast. This is not recorded in perfect environment, so there may be some background noise or small sounds around. And that is completely normal because most people do not have a studio setup. This is where Adobe Podcast becomes helpful. It can take this kind of everyday audio and improve it by removing noise and making the voice clear. So this sample is made to show the difference between a raw voice and an enhanced voice, and how AI can make a sample recording sound much better.
